

## PLANTS THAT ATTRACT BIRDS

Birds are beneficial to landscaping and the environment as a whole. They eat insects including aphids, mosquitos, and spiders, which reduces the need for chemical insecticides. Birds are also pollinators and will eat seeds to help prevent weeds from spreading.

COMMON NAME:                      BOTANICAL NAME:                      SUN/SHADE:

### **PERENNIALS**

Aster	Syphotrichum spp.	sun/part shade
Bachelor Button	Centaurea spp.	sun
Baptisia	Baptisia spp.	sun
Black-Eyed Susan	Rudbeckia	sun/part shade
Butterfly Weed/Milkweed	Asclepias tuberosa	sun/part shade
Coneflower	Echinacea	sun/part shade
Liatris	Liatris spicata	sun
Fountain Grass	Pennisetum alopecuroidea	sun
Joe Pye Weed	Eupatorium purpureaum	sun/part shade
Tickseed	Coreopsis	sun

### **ANNUALS**

Cosmos	Cosmos bipinnatus	sun
Marigolds	Tagetes spp.	sun
Sunflower	Helianthus	sun
Zinnia	Zinnia elegans	sun

### **VINES**

Virginia Creeper	Parthenocissus quinquefolia	sun
------------------	-----------------------------	-----

### **TREE/SHRUBS**

Beautyberry	Callicarpa spp.	sun/part shade
Birch	Betula spp.	sun
Black Chokeberry	Arena melanocarpa	sun/part shade
Cherry	Prunus spp.	sun
Crabapple	Malus spp.	sun
Dogwood	Cornus spp.	part shade
Elderberry	Sambucus	sun
Hemlock	Picea	shade
Juniper	Juniperus spp.	sun
Pine	Tsuga	sun
Redbud	Cercis canadensis	sun/part shade
Rugosa Rose	Rosa rugosa	sun
Serviceberry	Amelanchier spp.	sun/part shade
Spruce	Pinus	sun
Sumac	Rhus spp.	sun
Viburnum	Viburnum spp.	sun/part shade
Winterberry	Ilex verticillata	sun/part shade
